

Storage

 **TADIPOL**_{sl}

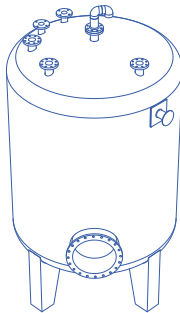

TADIPOL, is specialized in the production of fiberglass reinforced polyester tanks (GRP), with more than 40 years of experience, which become us to a benchmark company in many sectors.

During all these years, we have acquired a high level of specialization that allows us to offer to our customer the best solution for each project

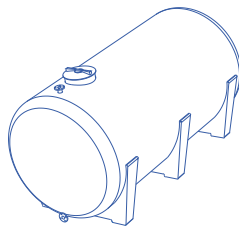

Tank models

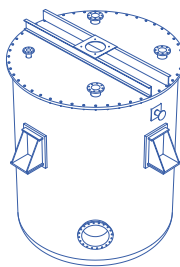

Aboveground vertical flat base tank

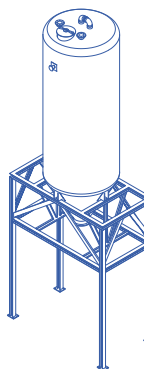

Vertical tank with supports

Aboveground horizontal tank with supports

Tank hanging

Silos with unloading on truck

Main sectors

-  Water treatment
-  Chemical industry
-  Metallurgic industry
-  Mining industry
-  Food industry
-  Energy industry
-  Pharmaceutical industry
-  Building industry

Storage

Thanks to the properties that GRP has, like for example high chemical resistance, and corrosion resistance, there are many products that can be stored in a GRP tank:

- Chemical products: Hydrochloric acid, sodium hypochlorite, sodium hydroxide, sulphuric acid, ferric chloride, etc ...
- Foodstuffs, liquid or solid: Water, oil, fat, brine, flour, salt, sugar, cocoa, etc...
- Construction's products: Cement, gypsum, clay

Depuration

The possibility of supplying fully pre-assembled equipment for wastewater treatment means a significant reduction in the assembly costs and in the civil work, consequently, these types of equipment are the most interesting solution.

Some examples of wastewater treatment equipment are: total oxidation treatment plant biological treatment plant, flat separators, hydrocarbon separators, pumping stations, and sludge decanters.

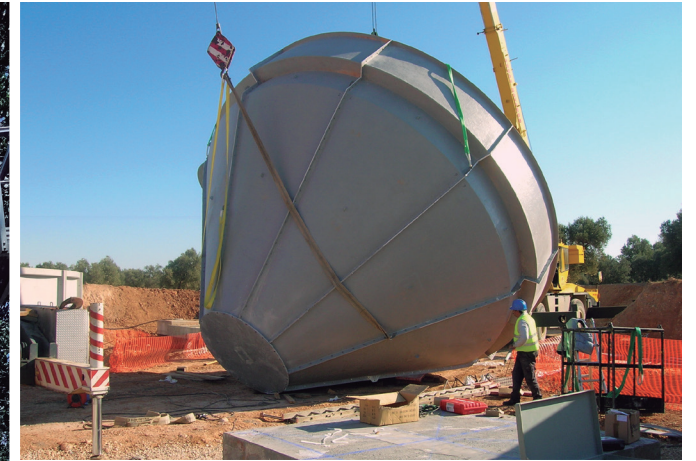

Chemical process equipment

Tadipol offers many different types of equipment for the chemical process industry, such a storage tanks, chemical reactors, mixing tanks, chimneys, etc. The high resistance to corrosion, that GRP has, makes this material very suitable to this kind of industry.

Silos with unloading on truck

Tadipol designs and produces silos with a metallic structure to unload on a truck. This kind of equipment is mostly used to store the salt on the road and also for silos of sludge dehydration in wastewater treatment plants. It is designed to unload the product directly onto the truck, making the job easier and reducing unloaded time, without using pumps, augers, etc.

Modular large capacity tanks

Tadipol is a specialist manufacturer of tanks and modular decanters. This large equipments, cannot be transported in one piece, therefore, they are manufactured into modules, easy to be transported, which can be assembled on-site by screws.

The use of GRP in these types of equipment is especially recommended for the corrosive product storage because this material has a high chemical resistance and is not affected by corrosion, consequently, maintenance costs are reduced.
